

# TIPS FOR HAPPY CAMPERS

- 1 Check out the facility first.** If this is your first time boarding your pet, make sure to tour the facility before dropping your pet off. Some facilities offer different kennel sizes or themed rooms, which are best gauged in person. If you can, do a test run for one night to see how your pet does in a new environment.
- 2 Ask about optional services to make your pet's stay more fun.** Many boarding facilities offer additional play time, doggy day care, or walks. Incorporating activities into your pet's stay can help the time go by faster.
- 3 Relax.** Calming supplements are available to help pets cope with the changes and new noises boarding brings to their routine. Ask your camp counselor about Zylkene.
- 4 Book early.** Book your pet's stay early and confirm your reservation as your trip gets closer.
- 5 Bring small comforts from home.** Bringing your pet's bed, toys, and treats can make the boarding facility feel more like home. Ask if the facility will allow you to bring your cat's personal litterbox.
- 6 Keep their diet the same.** Changing your pet's diet can upset your pet's stomach. Although many boarding facilities will provide food if needed, bringing your pet's own food with directions regarding how much to feed and what time of day is best.
- 7 Bring your pet's medical records.** If your pet is on any medication, don't forget to pack it with dosing instructions.

# BOARDING CHANGES YOUR PET'S ROUTINE.

Help your pet be a Happy Camper with Zylkene®

Zylkene is a non-sedating, calming supplement that can help your dog or cat cope with the changes boarding brings to their routine.

## How does Zylkene work?

The main ingredient is a hydrolyzed milk protein, which is proven to have a soothing effect on dogs and cats. Zylkene won't cause sedation or cause your pets to be less alert.

## Why should I use Zylkene?

Boarding can be stressful for your dog or cat. Zylkene helps your pet stay calm when their routine is disrupted.

In clinical studies, Zylkene significantly improved exploratory behavior, social contact with others and sleep patterns. These behaviors are an important part of the happy camper experience. Zylkene can help your pet rest easy and enjoy their stay.

## How to use:

Administer Zylkene at least 1-2 days before boarding and throughout their stay. If your pet is more anxious about changes in its life, then you may elect to start Zylkene as early as 5-7 days before boarding.

Consider activities at home that might put your pet on alert, such as packing in advance of your trip.

Zylkene comes in a capsule that can be given at meal time; administer whole or opened.

Talk to your Veterinarian about Zylkene® or visit [MyHappyPets.com](http://MyHappyPets.com)
